

## Report on ICANN Activity for September 17, 2018

### ATLAS III

No further information.

### Consolidated Policy Working Group (CPWG)

The CPWG is getting a bit better organized. The group has a number of issues to examine and produce an At-Large comment for, including (but not limited to):

- “Subsequent Procedures” for the next round of new Generic Top-L Domains
- A Proposed Unified Access Model for Registration Data (formerly WHOIS)
- Another aspect of the Access Model involving Accreditation for access to “non-public” Registration Data.
- Registration Data Access Protocol profile

The Registration Data Access Protocol profile is a rather technical document – one of the first comments was a remark that “we need technical guidance on this”. There will likely be comments from other technical groups in At-Large, but GTALUG might want to contribute. To that end, copies of this document were sent to Scott, Bill and Greg for their comments.

### WHOIS/"Registrant Data System" Policy Development Process ("EPDP")

This process, in a forum separate from the CPWG, is still proceeding at about the same pace as last month. They face a deadline in about two weeks, and another in mid-October. At some point, CPWG might be asked for comment on their product.

### Generic Top Level Domains – Discussions on the Next Round

See above under the “Consolidated Policy Working Group”. Various parts of the CPWG response are being drafted and will be combined in one recommendations document later.

### DNSSEC KSK Rollover Postponement

No further news that I am aware of.

### NARALO

Was unfortunately unable to attend the September meeting, and I have not yet had the time to go over the meeting recording.
